

The development of a tidal current power unit for the sea near Keelung

Cheng-Han Tsai,
Professor

PECC
2012/03/28

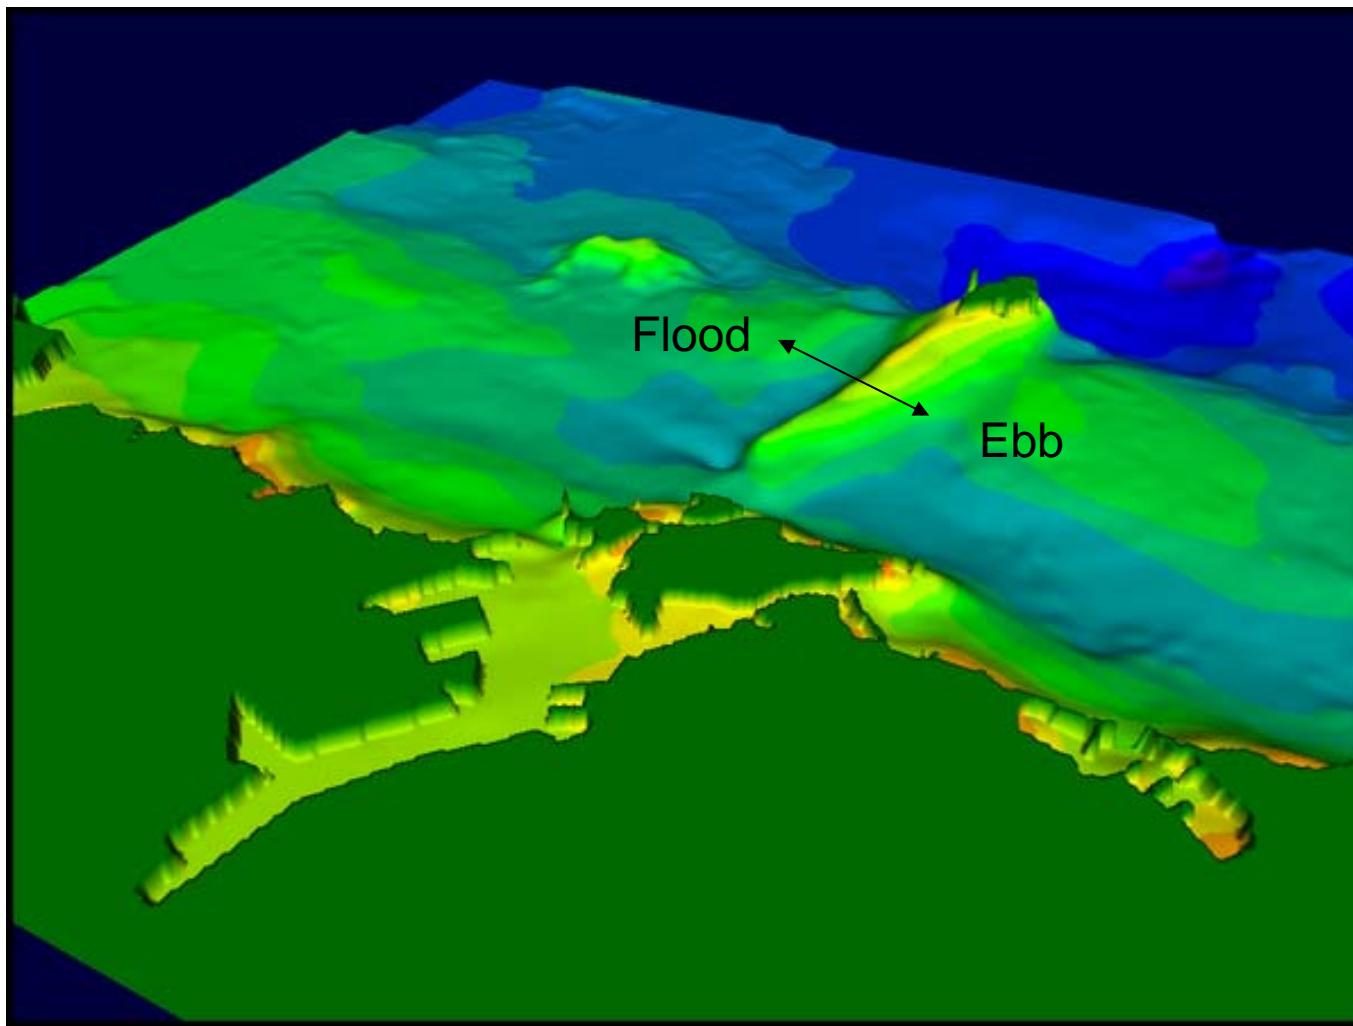

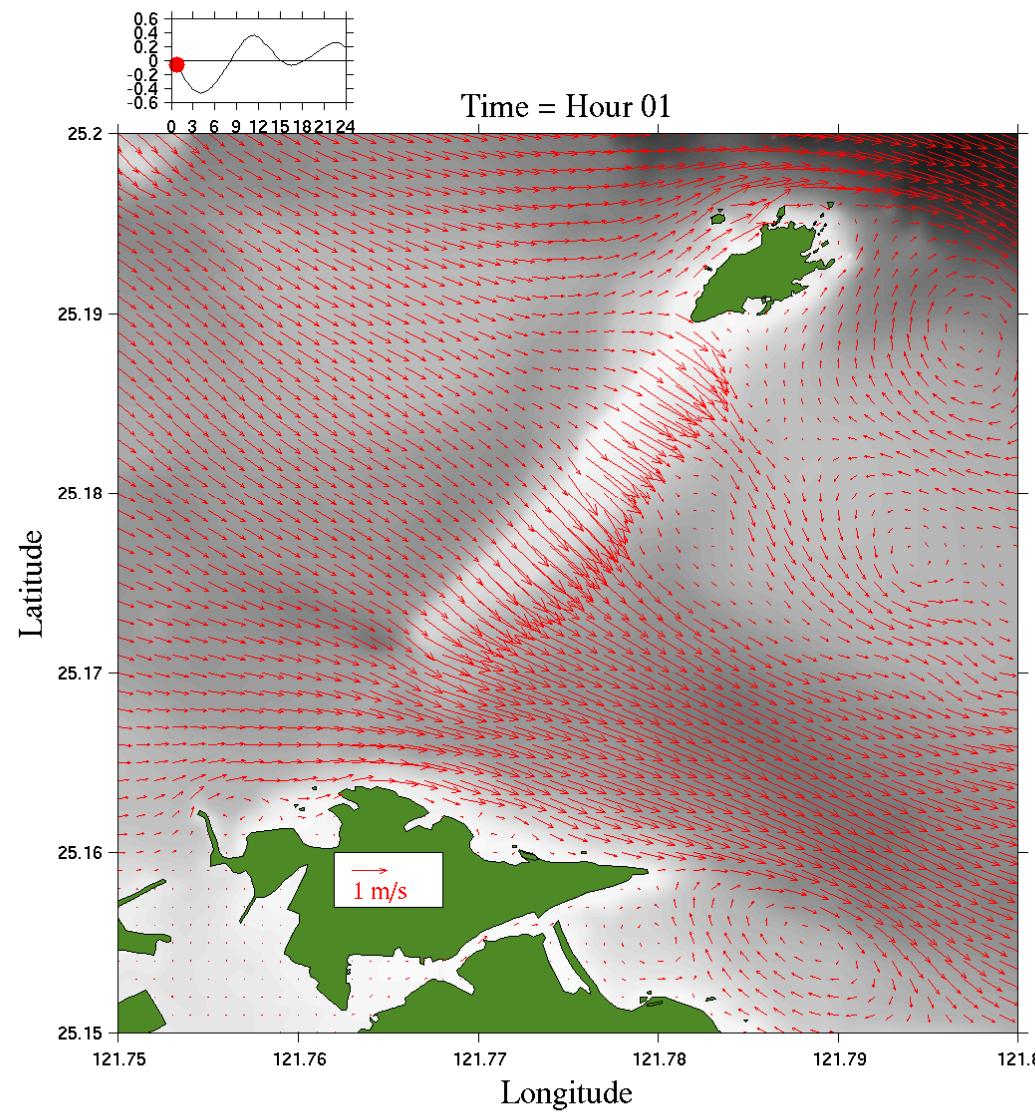

NTOU tidal power project structure (A 2010-2012 National Science Council project)

1. Tidal current simulation by numerical modeling
2. Assessment of tidal current power by in-situ measurements
3. Assessment of tidal current power by satellite remote sensing
4. Research and development of tidal current power unit
5. Typhoon wave forces on the tidal power unit

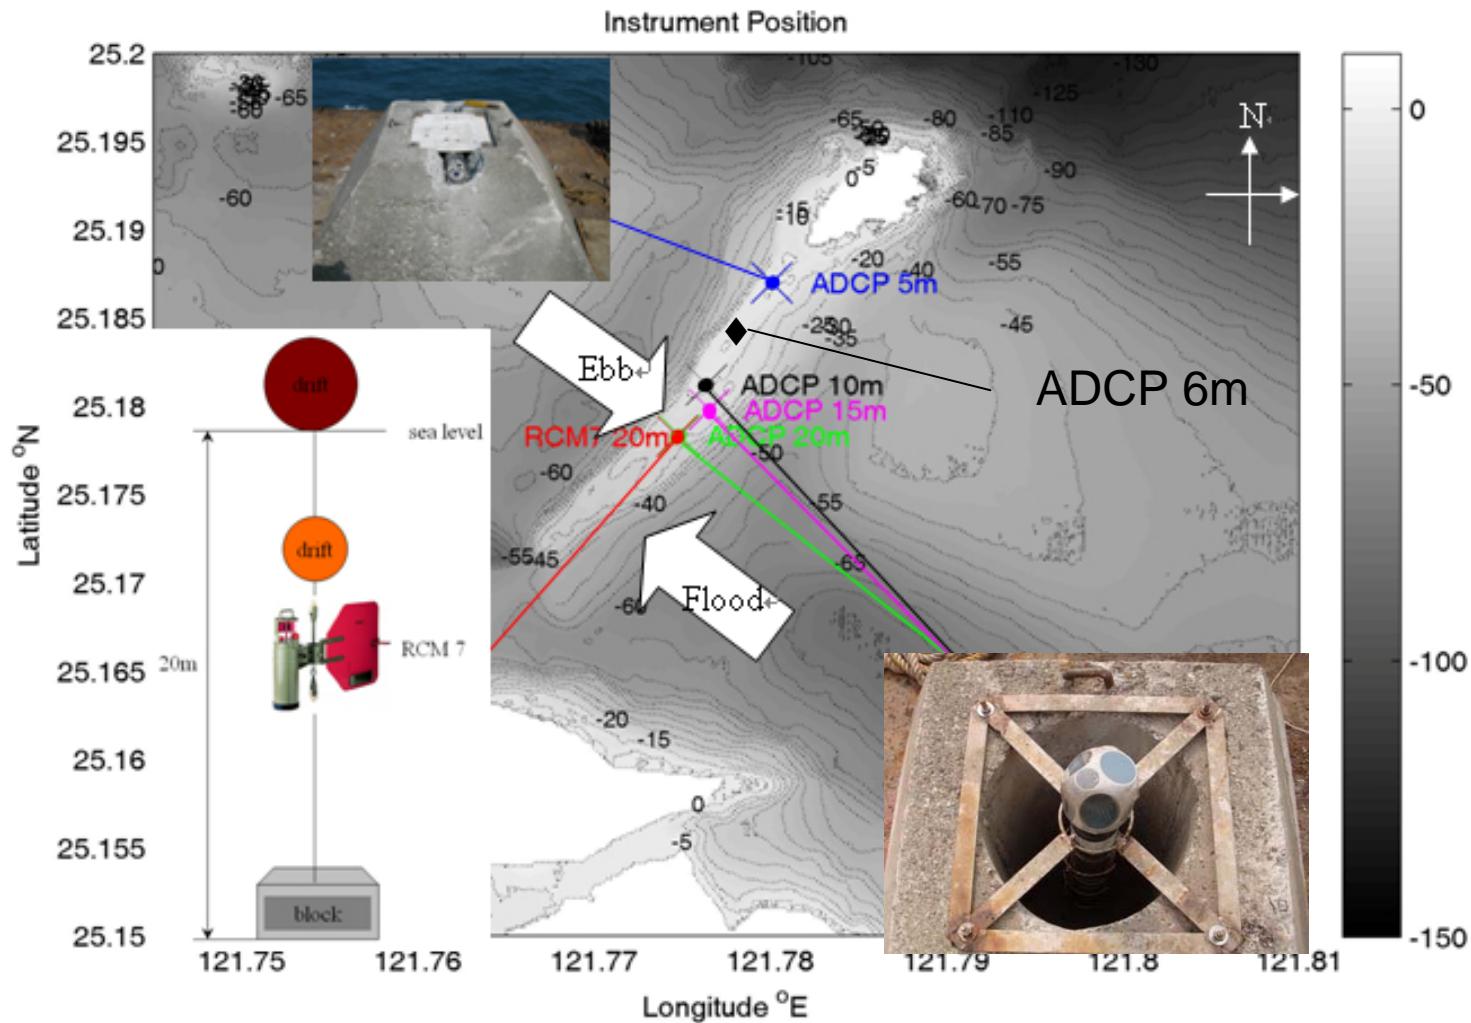

The Keelung Sill (2km by 300m)

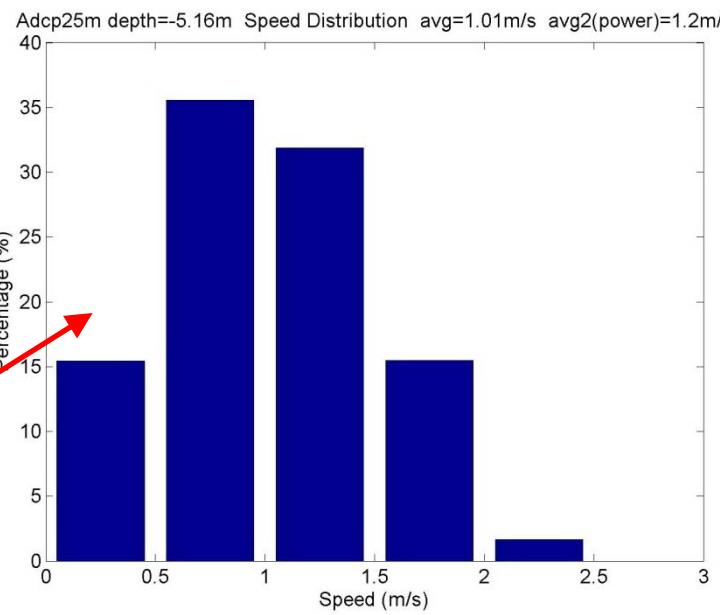

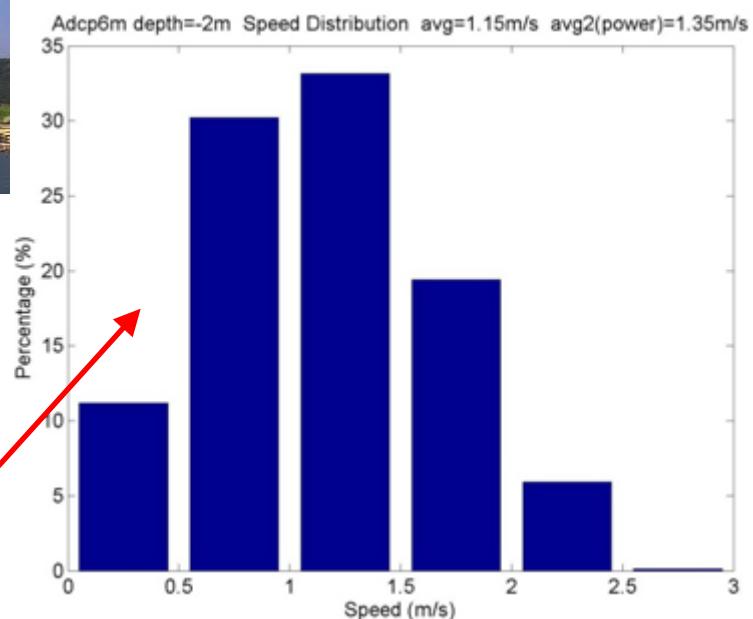

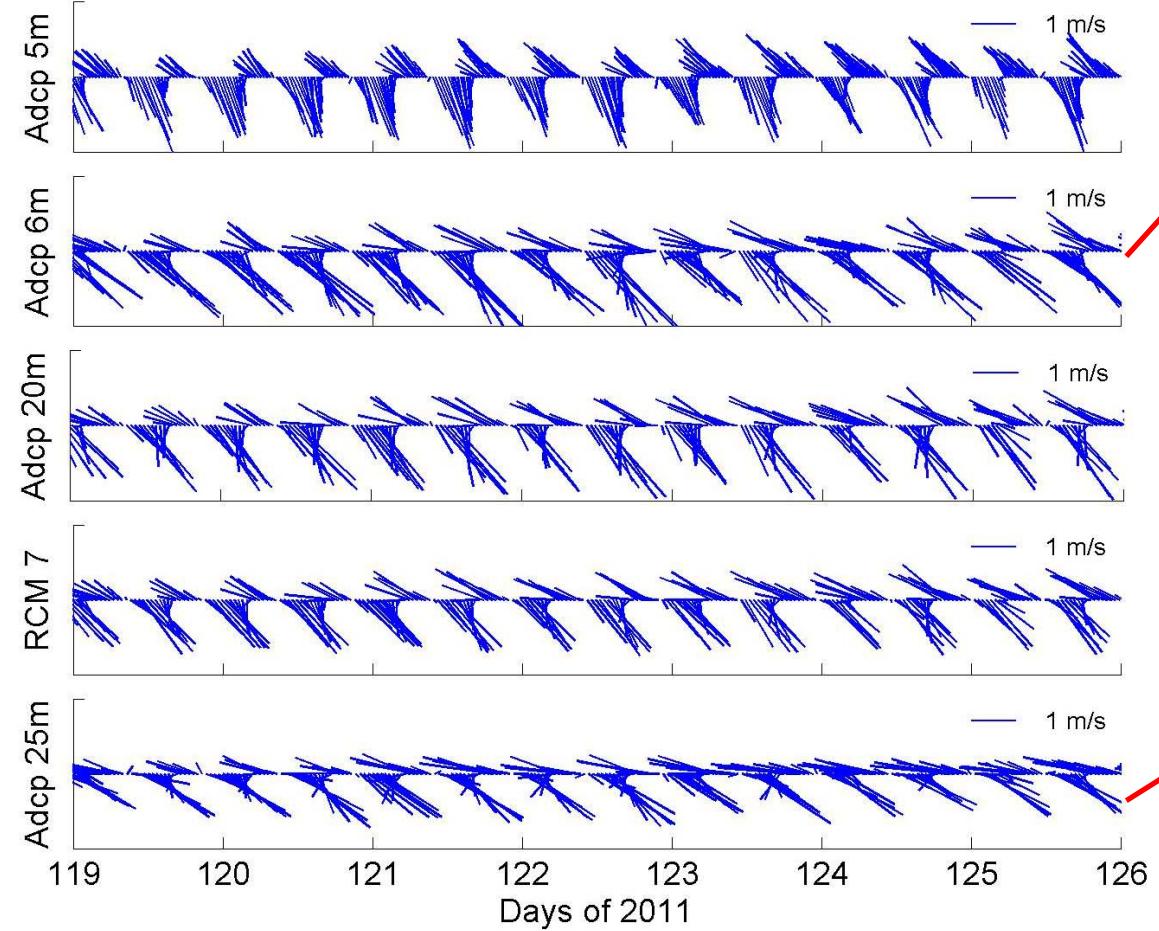

Rough surface on the Keelung Sill on 2011/08/06

Five deployments: 2010/02-03, 04-05, 07, 10 and 2011/04-05

On the design of turbine blade

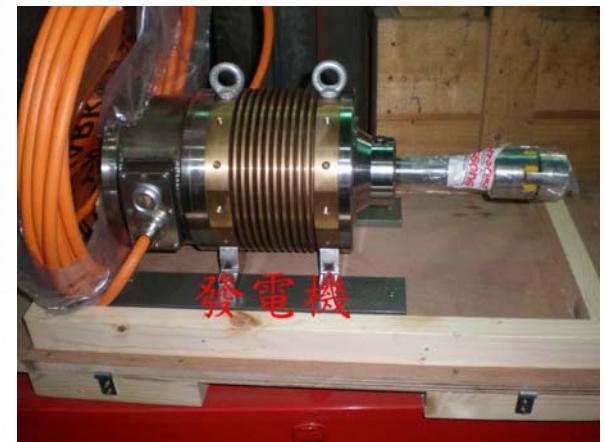

- Propeller lifting line theory is used for the design of the turbine blade.
- A 3-bladed turbine is adopted.
- The blade made of Ni-Al-Bronze.
- The design current speed is 3 m/s
- Blade diameter is 0.8m.
- 6.2 RPS

The power unit with aft-fins so that it can turn
with the tide

15: gear box

26: underwater generator

Tidal power unit

Cavitation tunnel in the NTOU

The third largest cavitation tunnel in the world
Test section 10m (l) x 2.6m (W) x 1.5m (H)
Variable and reversible current
Maximum speed of 12 m/s

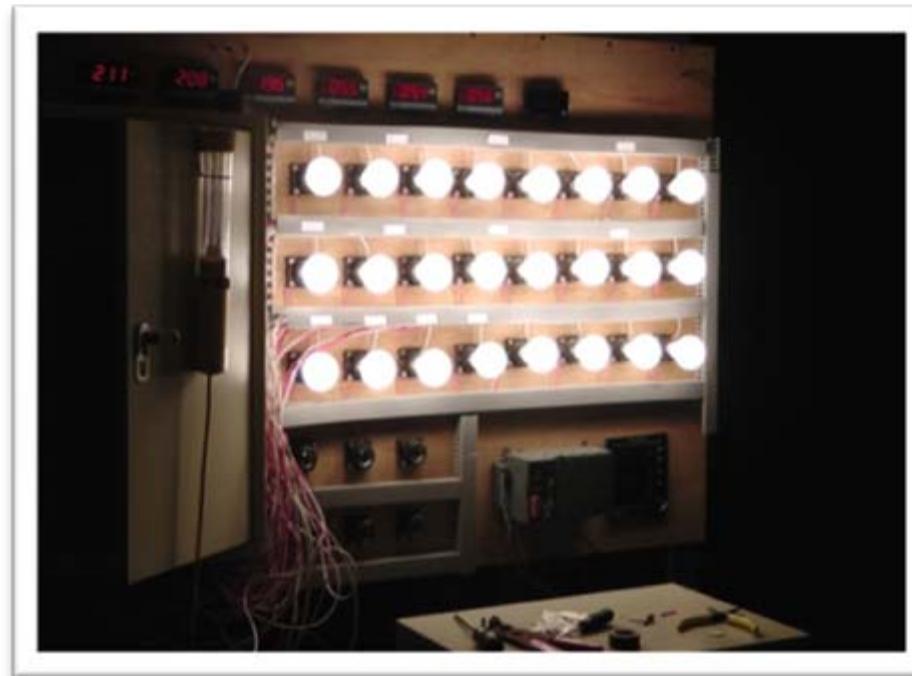

Tidal current unit turns towards the incoming flow

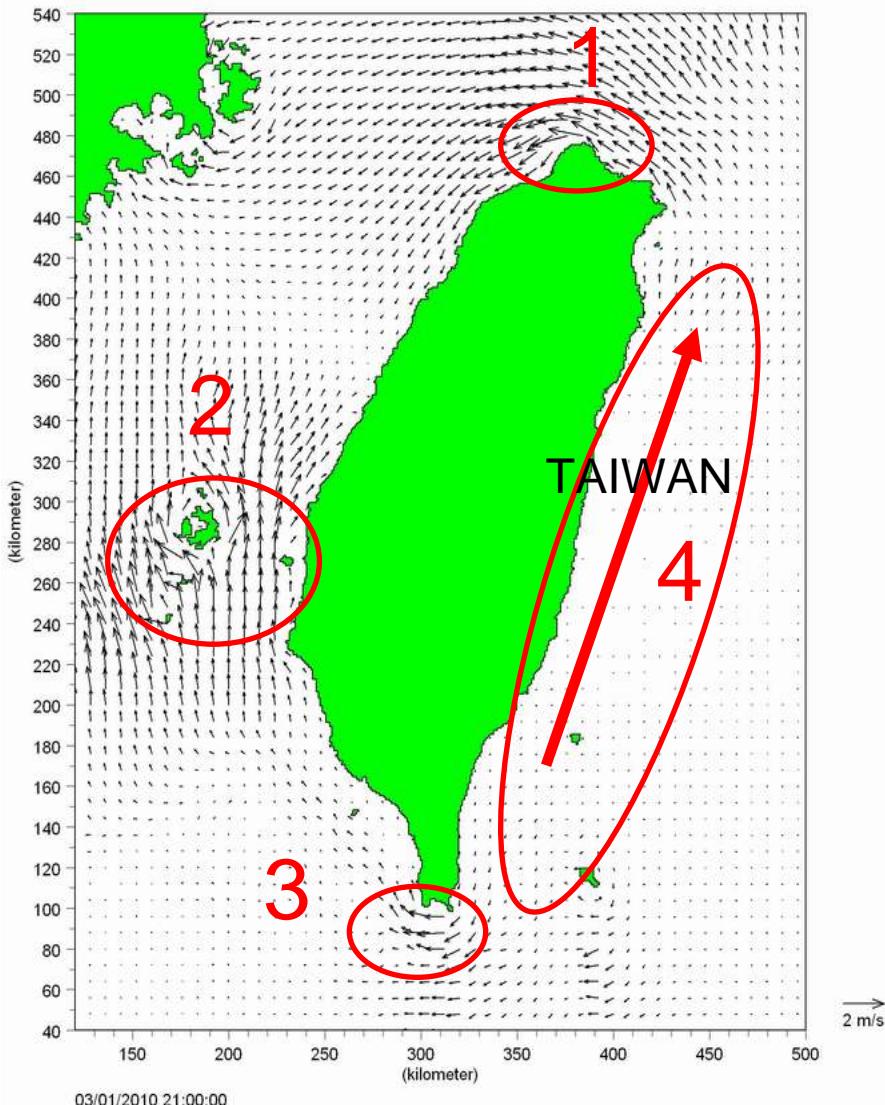

Our laboratory tests show that:

1. There is no water leakage.
2. The unit turns with the current.
3. At a speed of 3 m/s, the power generated is 1800 W.

4. The turbine itself is designed to generate 3 kW with the current speed of 3 m/s.
5. The total loss is 40%, including 20% in gear, transmission, and seals; with additional 20% in generator and power regulator system.
6. Our turbine design is on target.
7. Tests with 80 cm turbine showed that the start-up speed is 1.65 m/s
8. Tests with 1.22 m turbine showed that the start-up speed reduces to 1.35 m/s

Tidal stream potential sites

1. Northern coast
2. Penhu
3. Southern tip

Ocean current potential area
4. Kuroshio

Goal of the project:

This year, we will test this tidal current generator at the Keelung Sill site.

Ultimate goal:

1. Develop other tidal stream sites
2. Power generation using Kuroshio current

Thank you
